

Your multi-source recording studio in a single PC

Medialooks Direct Take is an easy-to-use professional video recording application for video producers and content creators who need to capture sports, concerts, video interviews and other events.

Record video from any hardware – use devices by Blackmagic Design, AJA, Bluefish444, Magewell, or web-cameras.

Capture network streams – use feeds from IP cameras, SRT devices, HLS streams, or NDI inputs.

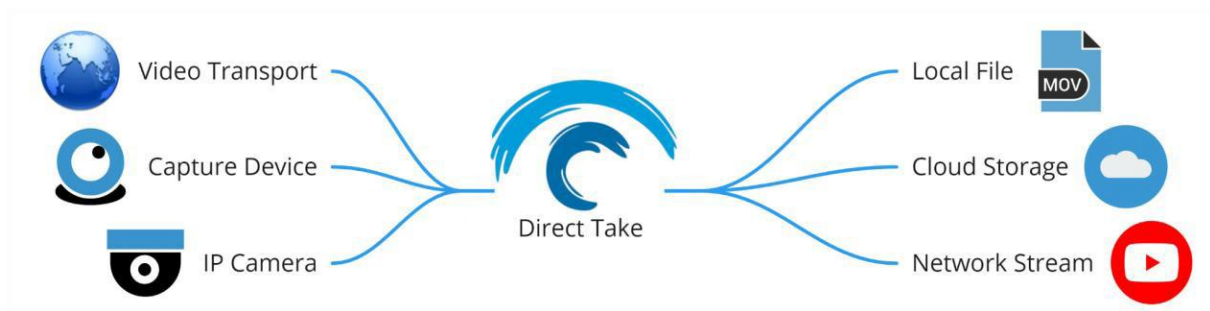

One to many recordings – create several recordings from one source (e.g. one for post-production and one for proxy).

Synchronize the process – record files from multiple sources synchronously with frame-accurate results.

Plan the recording – schedule recording sessions by setting start and stop times.

Be productive – use sessions and encoding presets in different scenarios.

Use case example

Tech Specs

Supported output containers

MP4
MOV
MXF
TS
AVI
MKV

Supported video codecs

HEVC (H.265)
AVC (H.264)
ProRes
XDCAM
MPEG-2
DNxHD/DNxHR

Input options

PCIe capture devices
USB capture devices
NDI streams
Medialooks Video Transport feeds
IP cameras streams
Network streams

Input features

Audio gain adjust
Mix input with external audio source

Supported output protocols

UDP
SRT
RTMP/RTMPS
HLS
MPEG-DASH

Supported audio codecs

AAC
MP3
AC3
PCM

Output features

Post-capture actions
(move or copy the recorded files
to a different location)
File naming templates
Chunk recording
Timecode processing

Hardware recommendations

Windows 10 x64
Intel i7-10700
NVIDIA Quadro P2000
16 GB RAM
